

CLAIMS

We claim:

1. A method for providing content, comprising the steps of:  
receiving a request for particular content, said request is received at a server;  
5 accessing a mark-up language description of said particular content;  
compiling said mark-up language description of said particular content to  
create executable code that provides said particular content, said step of compiling is  
performed at said server in response to said request; and  
transmitting said executable code from said server to a client.

10 2. A method according to claim 1, wherein:  
said request is from said client.

15 3. A method according to claim 1, wherein:  
said executable code implements a user interface that provides access to said  
particular content.

20 4. A method according to claim 1, wherein:  
said particular content includes data; and  
said data is compiled to executable code during said step of compiling.

25 5. A method according to claim 4, wherein:  
said step of compiling includes converting said data to action script and  
compiling said action script into action script byte code.

6. A method according to claim 1, wherein:  
said step of transmitting includes using HTTP to transmit said executable code  
via a network.

30 7. A method according to claim 1, further comprising the step of:

executing said executable code at said client.

8. A method according to claim 1, further comprising the steps of:  
accessing media content, said particular content includes said media content;  
5 transforming said media content to an accepted format; and  
adding said transformed media content to said executable code.

9. A method according to claim 1, wherein said step of compiling  
comprises the steps of:

10 converting said mark-up language description to action script; and  
compiling said action script into action script byte code.

10. A method according to claim 9, further comprising the steps of:  
accessing media content, said particular content includes said media content;  
15 transforming said media content to an accepted format; and  
adding said transformed media content to said executable code, said request is  
from said client, said executable code implements a user interface that provides  
access to said particular content, said particular content includes data and said data is  
compiled to executable code during said step of compiling.

20 11. A method according to claim 1, further comprising the step of:  
authenticating said request, said steps of compiling and transmitting are only  
performed if said step of authenticating is successful.

25 12. A method according to claim 1, further comprising the steps of:  
receiving a request from said client for second content, said second content  
includes data from an external data source, said particular content includes an  
application, said request for said particular content is received by and handled by a  
request handler in a presentation server, said request for said second content is  
30 received by and handled by said request handler in said presentation server;

connecting to said external data source;  
receiving data from said external data source;  
compiling said data; and  
transmitting said compiled data to said client.

5

13. A method according to claim 1, further comprising the steps of:  
receiving a request from said client for second content, said particular content  
includes a first application, said second content includes a second application called  
by said first application;

10

accessing a mark-up language description of said second content;  
compiling said mark-up language description of said second content; and  
transmitting said compiled mark-up language description of said second  
content to said client.

15

14. A method for providing content, comprising the steps of:  
receiving a request for particular content, said request is received at a server;  
accessing first code associated with said particular content;  
compiling said first code to create executable code that implements a user  
interface that provides access to said particular content, said step of compiling is  
performed at said server in response to said request; and  
transmitting said executable code from said server to a client.

20

15. A method according to claim 14, wherein:  
said request is from said client.

25

16. A method according to claim 14, wherein:  
said particular content includes data; and  
said data is compiled to executable code during said step of compiling.

30

17. A method according to claim 16, wherein:

said step of compiling includes converting said data to action script and compiling said action script into action script byte code.

5 18. A method according to claim 14, wherein:  
said step of transmitting includes using HTTP to transmit said executable code via a network.

10 19. A method according to claim 14, further comprising the step of:  
executing said executable code at said client.

15 20. A method according to claim 14, further comprising the steps of:  
accessing media content, said particular content includes said media content;  
transforming said media content to an accepted format; and  
adding said transformed media content to said executable code.

20 21. A method for providing content, comprising the steps of:  
receiving a request for content that includes data, said request is received at a server;  
accessing said data at said server;  
25 compiling said data at said server to create executable code, said executable code includes a representation of said data, said step of compiling is performed in response to said request; and  
transmitting said executable code from said server to a client.

30 22. A method according to claim 21, wherein:  
said request is from said client.

23. A method according to claim 21, wherein:  
said executable code implements a user interface that provides access to said data.

24. A method according to claim 21, wherein:  
said step of compiling includes converting said data to action script and  
compiling said action script into action script byte code.

5

25. A method according to claim 21, wherein:  
said step of transmitting includes using HTTP to transmit said executable code  
via a network.

10

26. A method according to claim 21, further comprising the step of:  
executing said executable code at said client.

15

27. A method according to claim 21, further comprising the steps of:  
accessing media content;  
transforming said media content to an accepted format; and  
adding said transformed media content to said executable code.

20

28. One or more processor readable storage devices having processor  
readable code embodied on said processor readable storage devices, said processor  
readable code for programming one or more processors to perform a method  
comprising the steps of:

25

receiving a request for particular content, said request is received at a server;  
accessing a mark-up language description of said particular content;  
compiling said mark-up language description of said particular content to  
create executable code that provides said particular content, said step of compiling is  
performed at said server in response to said request; and  
transmitting said executable code from said server to a client.

30

29. One or more processor readable storage devices according to claim 28,  
wherein:

said request is from said client.

30. One or more processor readable storage devices according to claim 28,  
wherein:

5       said executable code implements a user interface that provides access to said  
particular content.

31. One or more processor readable storage devices according to claim 28,  
wherein:

10       said particular content includes data; and  
      said data is compiled to executable code during said step of compiling.

32. One or more processor readable storage devices according to claim 28,  
15       wherein said method further comprises the steps of:

      accessing media content, said particular content includes said media content;  
      transforming said media content to an accepted format; and  
      adding said transformed media content to said executable code.

20       33. One or more processor readable storage devices having processor  
readable code embodied on said processor readable storage devices, said processor  
readable code for programming one or more processors to perform a method  
comprising the steps of:

25       receiving a request for particular content, said request is received at a server;  
      accessing first code associated with said particular content;  
      compiling said first code to create executable code that implements a user  
interface that provides access to said particular content, said step of compiling is  
performed at said server in response to said request; and  
      transmitting said executable code from said server to a client.

30

34. One or more processor readable storage devices according to claim 33,  
wherein:

said request is from said client.

5 35. One or more processor readable storage devices according to claim 33,  
wherein:

said particular content includes data; and

said data is compiled to executable code during said step of compiling.

10 36. One or more processor readable storage devices according to claim 33,  
wherein said method further comprises the steps of:

accessing media content, said particular content includes said media content;

transforming said media content to an accepted format; and

adding said transformed media content to said executable code.

15 37. One or more processor readable storage devices having processor  
readable code embodied on said processor readable storage devices, said processor  
readable code for programming one or more processors to perform a method  
comprising the steps of:

20 receiving a request for content that includes data, said request is received at a  
server;

accessing said data at said server;

25 compiling said data at said server to create executable code, said executable  
code includes a representation of said data, said step of compiling is performed in  
response to said request; and

transmitting said executable code from said server to a client.

38. One or more processor readable storage devices according to claim 37,  
wherein:

30 said request is from said client.

39. One or more processor readable storage devices according to claim 37,  
wherein:

5 said executable code implements a user interface that provides access to said  
data.

40. One or more processor readable storage devices according to claim 37,  
wherein said method further comprises the steps of:

accessing media content;

10 transforming said media content to an accepted format; and

adding said transformed media content to said executable code.

41. An apparatus, comprising:

one or more storage devices; and

15 one or more processors in communication with said one or more storage  
devices, said one or more processors perform a method comprising the steps of:

receiving a request for particular content, said request is received at a  
server, said request is from a client,

accessing a mark-up language description of said particular content,

20 compiling said mark-up language description of said particular content  
to create executable code that provides said particular content, said step of compiling  
is performed at said server in response to said request, and

transmitting said executable code from said server to said client.

25 42. An apparatus according to claim 41, wherein:

said executable code implements a user interface that provides access to said  
particular content.

43. An apparatus according to claim 41, wherein:

30 said particular content includes data; and

said data is compiled to executable code during said step of compiling.

44. An apparatus according to claim 41, wherein said method further comprises the steps of:

5       accessing media content, said particular content includes said media content;  
transforming said media content to an accepted format; and  
adding said transformed media content to said executable code.

45. An apparatus, comprising:

10       one or more storage devices; and

one or more processors in communication with said one or more storage devices, said one or more processors perform a method comprising the steps of:

receiving a request for particular content, said request is received at a server, said request is from a client,

15       accessing first code associated with said particular content,

compiling said first code to create executable code that implements a user interface that provides access to said particular content, said step of compiling is performed at said server in response to said request, and

transmitting said executable code from said server to said client.

20

46. An apparatus according to claim 45, wherein:

said particular content includes data; and

said data is compiled to executable code during said step of compiling.

25

47. An apparatus according to claim 45, wherein said method further comprises the steps of:

accessing media content, said particular content includes said media content;  
transforming said media content to an accepted format; and  
adding said transformed media content to said executable code.

30

48. An apparatus, comprising:

one or more storage devices; and

one or more processors in communication with said one or more storage devices, said one or more processors perform a method comprising the steps of:

5 receiving a request for content that includes data, said request is received at a server, said request is from a client,

accessing said data at said server,

10 compiling said data at said server to create executable code, said executable code includes a representation of said data, said step of compiling is performed in response to said request, and

transmitting said executable code from said server to said client.

49. An apparatus according to claim 48, wherein:

15 said executable code implements a user interface that provides access to said data.

50. An apparatus according to claim 48, wherein said method further comprises the steps of:

accessing media content;

20 transforming said media content to an accepted format; and

adding said transformed media content to said executable code.
